PAIN MANAGEMENT

Harrington

HEALTHCARE SYSTEM

Total Local Care

**Reduce pain.
Increase mobility.
Improve your quality of life.**

Chronic pain can have a debilitating effect on your life.

The Pain Management Center at Harrington is a complete, comprehensive clinic with board-certified physicians.

If you or a loved one has been suffering from a long-term, chronic pain, it's time to seek help from our specialists. We'll work to assess your pain and develop the best treatment for your lifestyle.

Why choose our Pain Center?

Patients seek pain management care for many reasons, including:

- Arthritis
- Back pain/sciatica
- Cancer-related pain
- Headaches
- Injury/trauma pain
- Joint pain
- Muscle spasms
- Neck pain
- Neuropathy
- Pain following accidents/surgery
- Pelvic pain
- Spinal stenosis

We can help:

- Assist in reducing your pain
- Explain the various methods of pain control
- Restore the ability to live an active lifestyle at work and home
- Assist in managing your stress, depression, and anger
- Aid your family and loved ones in the awareness of pain management

Cancer-related pain

Having cancer does not always mean having pain. But if you do have pain, we can help develop a tailored plan to meet your needs, including medical or non-medical treatments.

Cancer pain management options include:

- Injections
- Nerve block
- Oral medications
- Pump-controlled medication
- Spinal analgesia
- Surgery

It is important to let your physician know whether pain treatments are working, in case adjustments in dosages or medication are needed.
