

What Our Patients Are Saying* ...

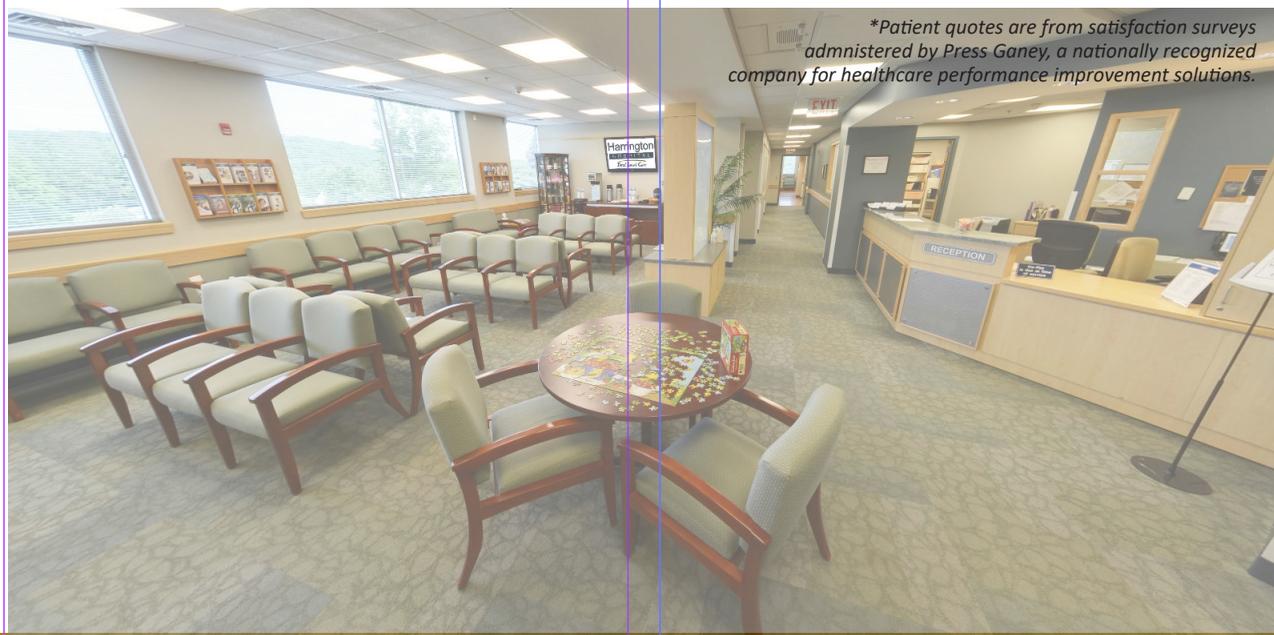

My experience has been excellent. The nurse that I have been dealing with at The Cancer Center has been very attentive to my concerns, and very informative.

Everybody has been professional and understanding.

Southern Worcester County is fortunate to have a facility as well stocked and trained as The Cancer Center at Harrington.

Who needs to go to those 'other cancer centers' when you can have the same care right here?

Everyone at this facility is friendly, helpful, and kind. They always do their best to see to my comfort during my treatment and not only make me feel better physically, but emotionally as well.

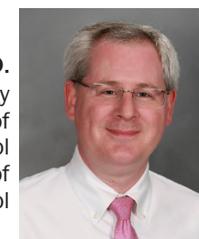

**Patient quotes are from satisfaction surveys administered by Press Ganey, a nationally recognized company for healthcare performance improvement solutions.*

The
CANCER CENTER
at Harrington

**Delivering the highest
standard of patient-family
care through diagnosis,
treatment, recovery
and survivorship.**

85%

of cancer patients choose to have their care close to home.

At The Cancer Center at Harrington, we are proud to offer advanced oncology, hematology, and radiation services to patients throughout south central Massachusetts and northern Connecticut.

We are a comprehensive, state-of-the-art medical center that provides the best of both worlds: outstanding technology and personalized care. By offering world-class care close to home, our patients don't have to travel long distances. We help them fight their disease—not fight with traffic and parking.

Our spacious center provides natural lighting, private infusion areas, and an experience unique to any nearby facility.

Our board-certified medical oncologists are Clinical Associate Professors at UMass Medical School in Worcester. They bring a wealth of experience, expertise, and compassion to cancer and hematology patient care services.

Professionals within our Cancer Center include dedicated oncology nurses, technicians, social workers, pharmacists, and volunteers.

Hematology Services

Our physicians diagnose and treat all types of adult blood disorders, including:

- Anemia
- Bleeding and blood clotting abnormalities
- Polycythemia
- Sickle cell disease

Through a comprehensive care plan, patients are supported by our hematology laboratory, transfusion services, and certified nurses, helping us to provide integrated, exceptional therapy.

Clinical Trials

Our physicians participate in a variety of clinical trials—research studies that test new medical approaches for safe and effective results. These trials explore research methods for cancer and/or reveal improvements in cancer prevention methodologies and early detection.

Additional Patient Services

- Dietary/nutrition management
- Genetic counseling
- Lab services
- Pain management
- Lymphedema, physical therapy, and occupational therapy
- Support groups
- Surgical services
- Palliative care assistance
- Patient resource room

“They treated everybody with respect, like you’re part of the family. During treatment, they’re the people you can depend on and talk to. They made things as comfortable for me as they could, answered any questions, calmed my fears, and explained things fully.”

-Terance Grant

“Having gone through this whole thing for a year now, I have to wonder why people would drive all the way to Boston when you get the same, maybe even better care, right here at Harrington.”

-Joann Grindle

Central Massachusetts Cancer Center
21st Century Oncology Affiliate

Radiation Therapy

Our radiation therapy, offered by 21st Century Oncology, is located on the first floor of our building.

21st Century Oncology offers state-of-the-art radiation therapy and integrated cancer treatment services.

Available treatments include:

- Intensity-Modulated Radiation Therapy (IMRT): Carefully calculated beams of radiation are delivered at multiple angles by a revolutionary computer system.
- Image-Guided Radiation Therapy (IGRT): A sophisticated treatment that uses a target image to guide the delivery of radiation for each treatment.
