women's health.**

# Compassionate Women's Healthcare

Our approach to women's health is to bring personalized, high quality and compassionate care for gynecology and urogynecology concerns. Our practice can take care of you -- from adolescence through post-menopausal years.

Our staff sees you as a member of their family, and our patients appreciate not having to travel far or pay for parking. With flexible scheduling, we provide exceptional healthcare within minutes from your home or work.

We offer consultations, medication management, supportive therapy and minimally-invasive surgical procedures, among other treatment options. Our physicians are highly-trained experts in their field.

Some of our Gynecology services include:

- Cervical cancer screenings
- Diagnosis and treatment of Endometriosis
- Laparoscopic and hysteroscopic surgery
- Birth control management, including Essure, Skyla, Nexplanon, Mirena and Paraguard IUDs
- Surgical contraceptive choices
- Treatment of HPV and other STIs

## What is Urogynecology?

Urogynecology focuses on disorders and conditions that relate to the urinary tract. It is more commonly known as female pelvic medicine & reconstructive surgery,

**Approximately one in three women will experience urogynecology disorders.** The most common complaints are incontinence, pelvic pain and pelvic prolapse.

Following a consultation with our specialists, patients may receive advanced urodynamic testing which can pinpoint:

- Urinary incontinence (stress, urge, or mixed)
- Overactive bladder (with or without incontinence)
- Prolapse (bladder, uterine, vaginal, or rectal prolapse)
- Pelvic pain (interstitial cystitis)

After diagnosis, we further consult with the patient before proceeding with a treatment plan, which often includes a period of physical therapy or biofeedback. Other therapy options include conservative management to tension-free vaginal tapes (sling procedures), bladder lifts, and hysterectomy.

Patients requiring advanced treatment may also be candidates for our state-of-the-art, minimally-invasive procedures, including pelvic reconstructive and vaginal prolapse surgery.
